

Formular for the creation of good practice examples

Thank you for supporting the web portal with a good practice example of your event!

With the following form we would like to support you in formulating the details of your example in an uncomplicated and structured way. Simply answer the individual questions one after the other.

Note: The aim of the good practice examples is to provide readers with a detailed insight into a measure. This includes not only success stories, but also the methods used and challenges overcome. We would therefore like to ask you to focus on a single measure (e.g. reuse of materials, selection of sustainable volunteer clothing) and refrain from enumerating.

If you would like to submit more than one example, please fill out another form.

Key Data

Event:

Place and date of the event:

Rate on a scale from 1 (low) to five (high):

Impact*:	Time effort
Personnel effort:	Budget:

*refers to the effect that the measure has on the sustainability of the sporting event

1. Give your example a meaningful title.

(Note: You can use the following information: Specification of the type of sport practiced, name of the event, sustainability area (e.g. "energy and climate", "catering", "accessibility"), keywords for the measure carried out (e.g. "participation", ...)

Please provide your answers in a short, coherent text with all relevant information.

2. Name the specific measure. What have you implemented?

BACKGROUND

3. Describe the initial situation before implementing the measure. What specific problem does your measure address? What is the central sustainability goal?

REALISATION

4. Describe the most important steps of the implementation.

5. Name any challenges you encountered during implementation and describe how you overcame them and why you were unable to do so.

6. Were there any unexpected results or changes in the course of the project that had an impact on your measure?

7. Name and describe the factors that contributed to the successful implementation of your measure.

8. Which partners or technologies were involved in the implementation? What or who supported you?

9. What materials or resources were used and to what extent were sustainability aspects taken into account?
